

Introduction to z/OS Security - Learning Pathway

Introducing z/OS Security

The “Introduction to z/OS Security” Learning Pathway incorporates existing generic e-learning in the form of Datatraining course modules, with the details of your systems environment, and the standards and practices used by your organization.

The “**Our z/OS Security**” PowerPoint module appearing in the pathway is to be used by your own presenter, and contains templates providing an overview of the mainframe and z/OS security setup. This includes the security software used, the physical mainframe security, securing network data, and z/OS subsystems security. Notes are provided with each slide explaining what your presenter needs to customize, and what information should be discussed in the audio component.

The “**Our z/OS Security Administration and Auditing**” PowerPoint module covers how z/OS security administration and auditing is performed at your site. It includes information on security related tools, and event logging and log archive retention.

The “**Understanding z/OS Security and Your Role**” PowerPoint module that appears at the end of the pathway is to be used in a Webinar environment and uses the expertise within your own organization to impart information about the z/OS security issues, priorities and support personnel required by your learners. The Webinar format allows the learner to interact with the presenter with various scenarios associated with z/OS security, and the individual and team role they play. It also looks at priorities and current and future z/OS security related projects in your organization.
